

Scenario

As a Learning Specialist, you are tasked with supporting the **Patient Partnership Office** in creating a **3-minute eLearning module**. This self-paced microlearning should effectively engage the learner, address **1–2 key concepts**, and fulfill the requirements of **just-in-time learning**.

- **Training Goal:** Increase awareness among hospital patients and their designated support people about the importance of **hand hygiene** in preventing infections during their hospital stay.
- **Access:** The microlearning will be accessed online via a link and viewed on either the patient's phone or a hospital-provided iPad.

Your Task

If you use an authoring tool:

1. Clearly state the purpose of the training and the intended outcome.
2. Design and create the eLearning/microlearning module, organizing the key concepts and sequencing the training content.
3. Incorporate visual and design elements, navigation features, and interactive components appropriate for the audience and format.

If you don't use an authoring tool:

1. Clearly state the purpose of the training and the intended outcome.
2. Develop a content outline, organizing the key concepts and sequencing the training content.
3. Describe the look and feel of the product, including the visual and design style, and navigation features.
4. Explain how the learner will be engaged and describe the interactive components appropriate for the audience and format.
5. Provide an example of how the knowledge will be effectively translated (e.g., a storyboard or sample activity).
6. Propose how the product could be evaluated for continuous quality improvement.

Deliverables

You are expected to deliver either:

1. **An eLearning/microlearning module** (if you have access to the authoring tools),
OR
2. **If the required authoring tools are not available:**

- A one-page training outline, supplemented with a storyboard or images if applicable.
- A list of all planned interactive components to enhance learner engagement.
- A list of knowledge check activities designed to reinforce key learning points.

For both options:

- A description of post-training evaluation activities to ensure continuous quality improvement.

Guidelines:

- Focus on keeping the module **simple, engaging, practical, and relevant**.
- Ensure your proposal reflects an understanding of the **audience** and the importance of **hand hygiene** in patient safety.
- Demonstrate **creativity** within the constraints of a 3-minute microlearning module.
- Incorporate **appropriate engagement and knowledge retention techniques**.
